DAEKWANG SENSOR

THERMISTOR & SENSOR ASSEMBLY

DAE KWANG
SENSOR TECHNOLOGY

THERMISTOR SENSOR Markets AND Applications

CONSUMER ELECTRONICS

- Air conditioners
- Clothes dryers
- Dishwashers
- Electric water heaters
- Fire detectors
- Home weather stations
- Oven temperature control
- Rechargeable battery packs
- Refrigerator and freezer temperature control
- Small appliance controls
- Solar collector controls
- Toasters
- Washing machines
- Hot water boilers
- Fan heater
- Bidet

FOOD HANDING And PROCESSING

- Coffee makers
- Deep fryers
- Fast food processing
- Perishable shipping
- Temperature controlled food storage systems
- Thermometers for use in food preparation

COMMUNICATION

- Rectifier
- SMPS
- BMS

MEDICAL ELECTRONICS

- Blood analysis equipment
- Blood dialysis equipment
- Blood oxygenator equipment
- Clinical fever thermometers
- Esophageal tubes
- Infant incubators
- Internal body temperature monitors
- Internal temperature sensors
- Intravenous injection temperature regulators
- Skin temperature monitors
- Thermodilution catheter probes

AUTOMOTIVE

- Automatic climate control
- Coolant sensors
- Electric coolant fan temperature sensors
- Emission controls
- Engine block temperature sensors
- Engine oil temperature sensors
- Intake air temperature sensors
- Oil level sensors
- Outside air temperature sensor
- Transmission oil temperature sensors
- Water level sensors
- Inverter
- Converter
- BMS

We serve customers with the best quality with confidence and passion

DAE KWANG Sensor has extensive experience in designing Thermistor Sensor Assemblies to suit the specific needs of users for a wide range of applications.

Has supplied quality products such as temperature sensors to a variety of industries such as automotives, home appliances, medical devices and telecommunications, since foundation in 1992.

We will continue to strive to realize customer satisfaction and quality management goals, and promote technical development to remain competitive and supply the best products to contribute to the corporate competitiveness and development of customer companies.

MOLDING TYPE

FEATURES

- Operating Temperature : -40 ~ 105 °C
- Withstand Volatage : 1800 VAC for 1 sec
- Insulation resistance : Min 100 MΩ at 500 VDC (Normal temperature)

RING TERMINAL TYPE

FEATURES

- Operating Temperature : -40 ~ 105 °C
- Withstand Volatage : 1800 VAC for 1 sec
- Insulation resistance : Min 100 MΩ at 500 VDC (Normal temperature)

CASE TYPE

FEATURES

- Operating Temperature : -40 ~ 105 °C
- Withstand Volatage : 1800 VAC for 1 sec
- Insulation resistance : Min 100 MΩ at 500 VDC (Normal temperature)

CASE & BRACKET TYPE

FEATURES

- Operating Temperature : -40 ~ 230 °C
- Withstand Volatage : 1800 VAC for 1 sec
- Insulation resistance : Min 100 MΩ at 500 VDC (Normal temperature)

NIPPLE TYPE

FEATURES

- Operating Temperature : -40 ~ 105 °C
- Withstand Volatage : 1800 VAC for 1 sec
- Insulation resistance : Min 100 MΩ at 500 VDC (Normal temperature)

ETC.

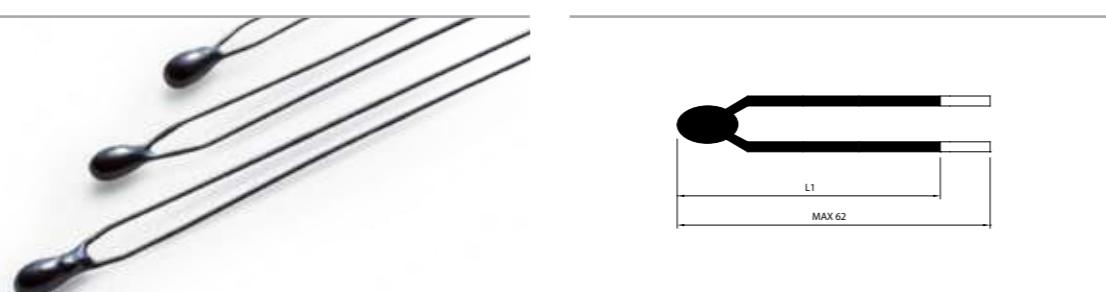

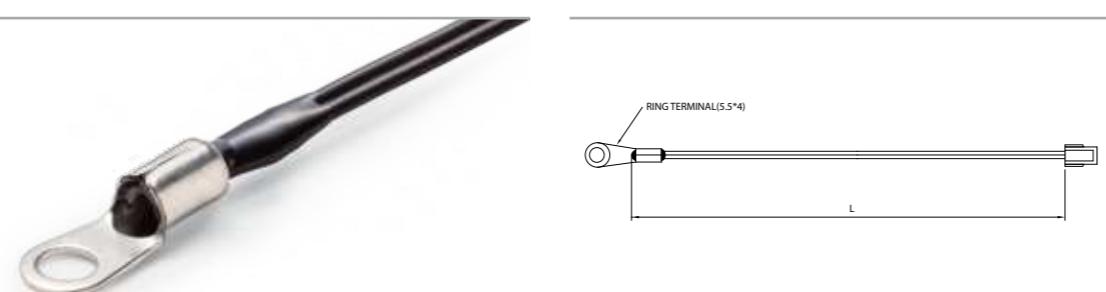

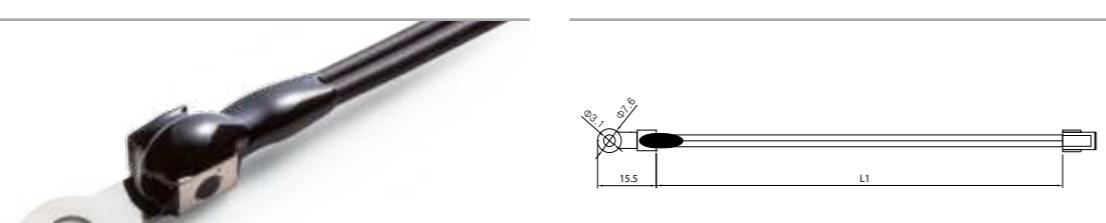

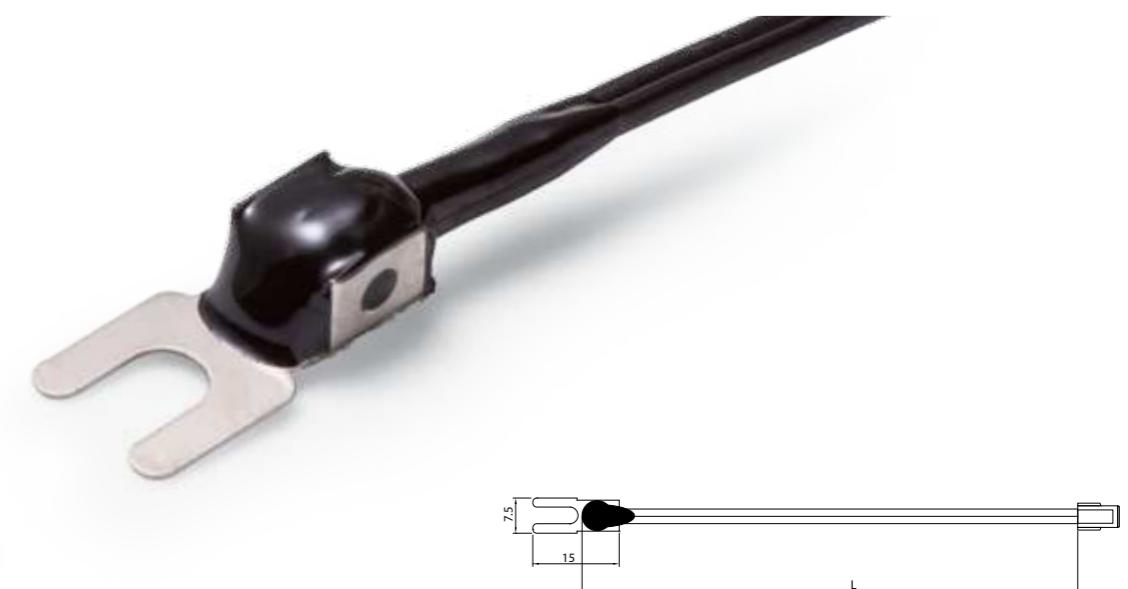

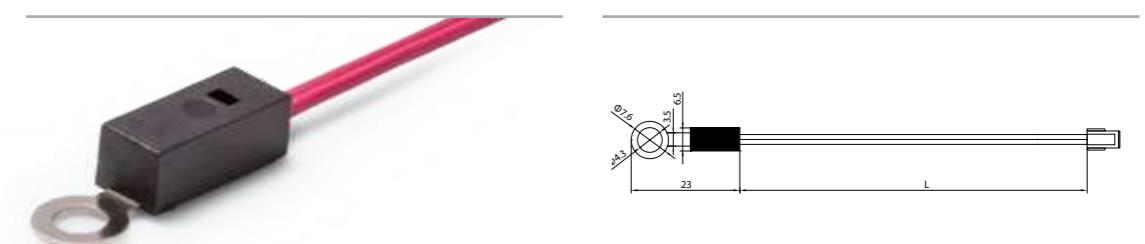

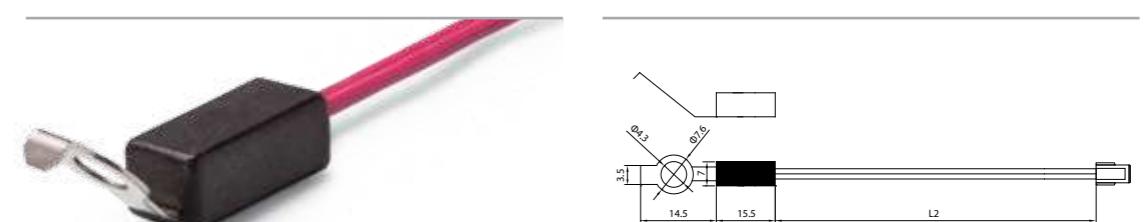

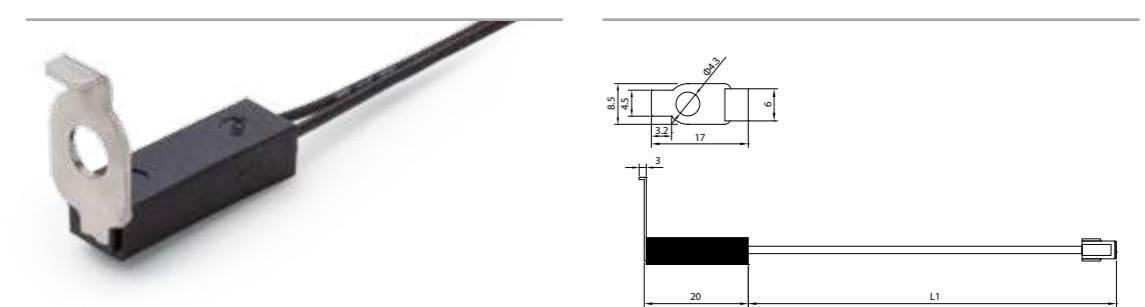

FEATURES

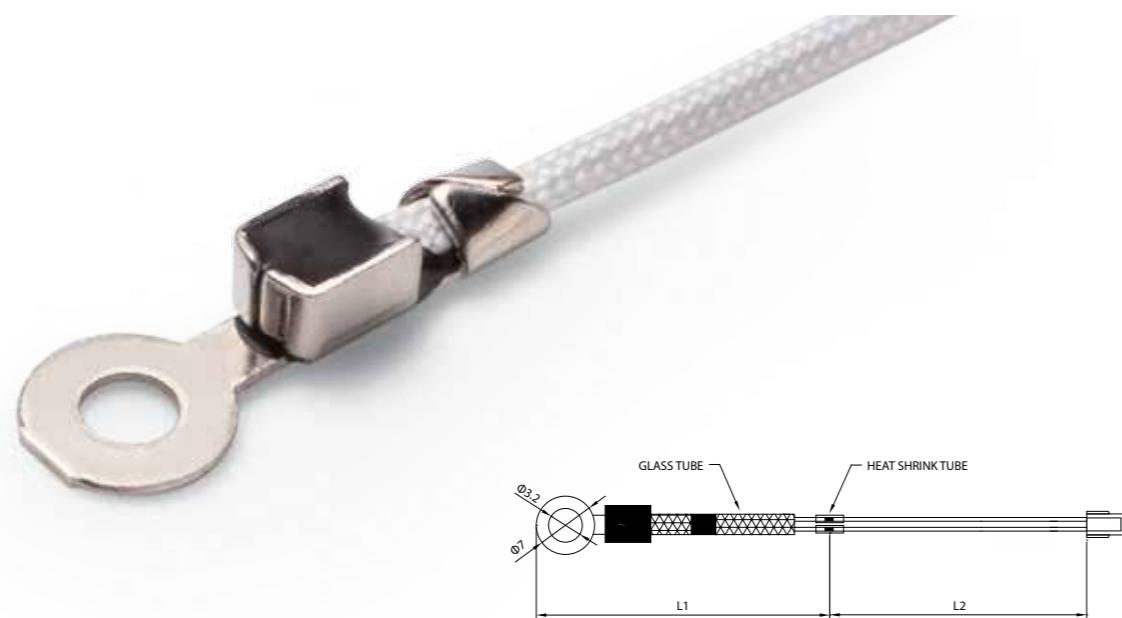

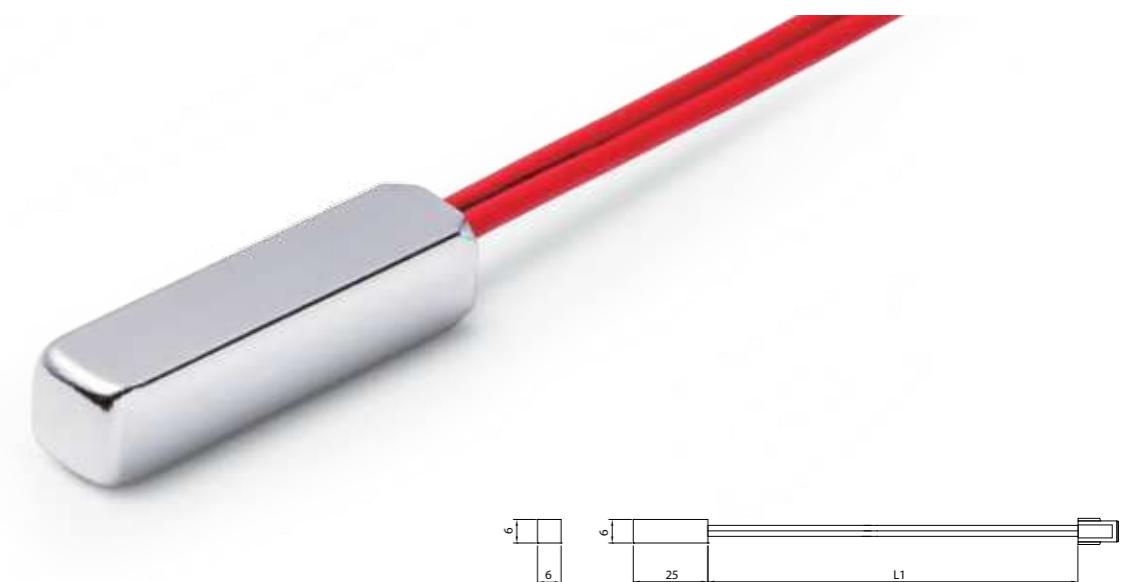

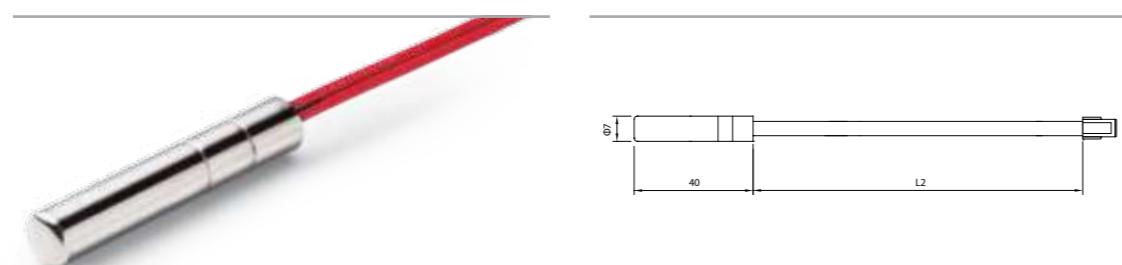

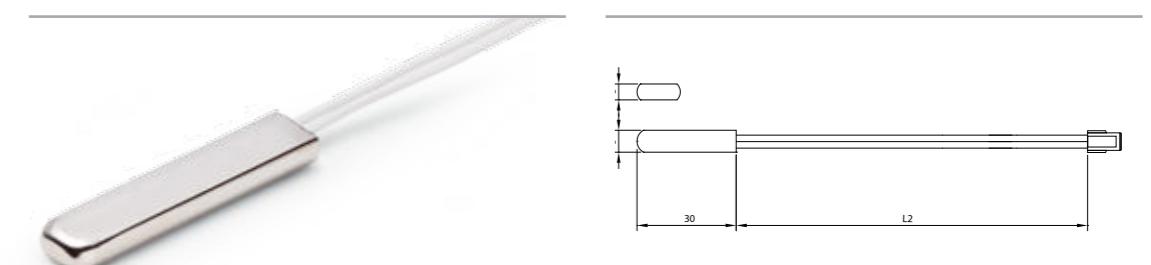

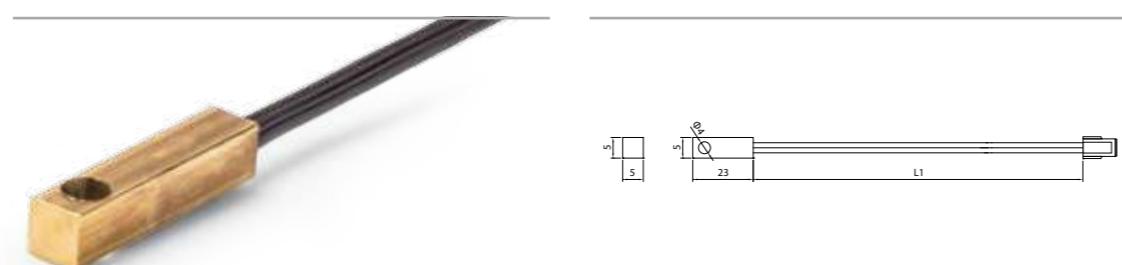

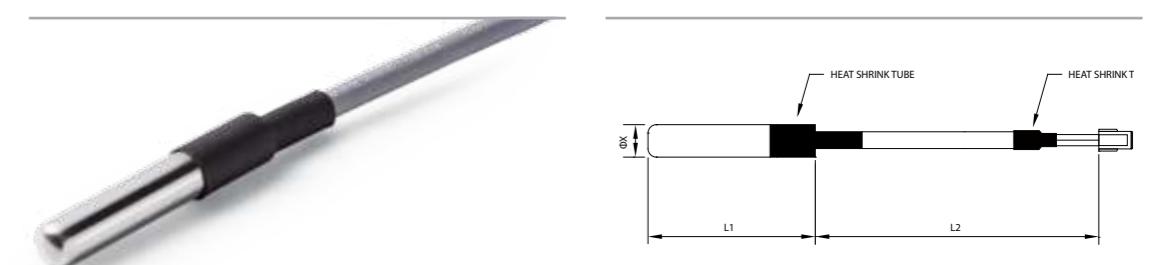

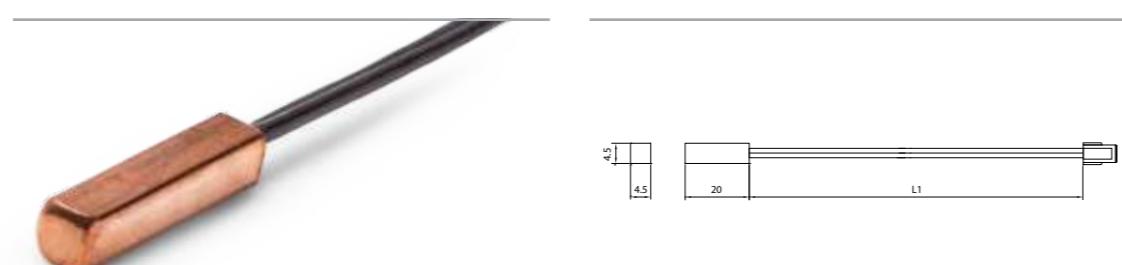

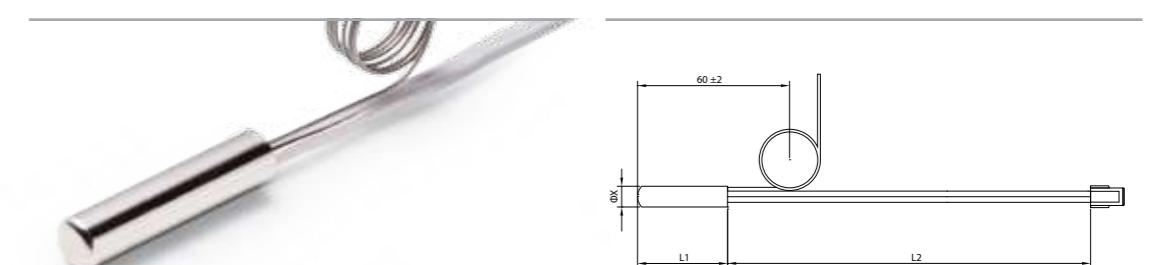

- Operating Temperature : -40 ~ 200 °C
- Withstand Volatage : 1800 VAC for 1 sec
- Insulation resistance : Min 100 MΩ at 500 VDC (Normal temperature)

REED S/W ASSEMBLY

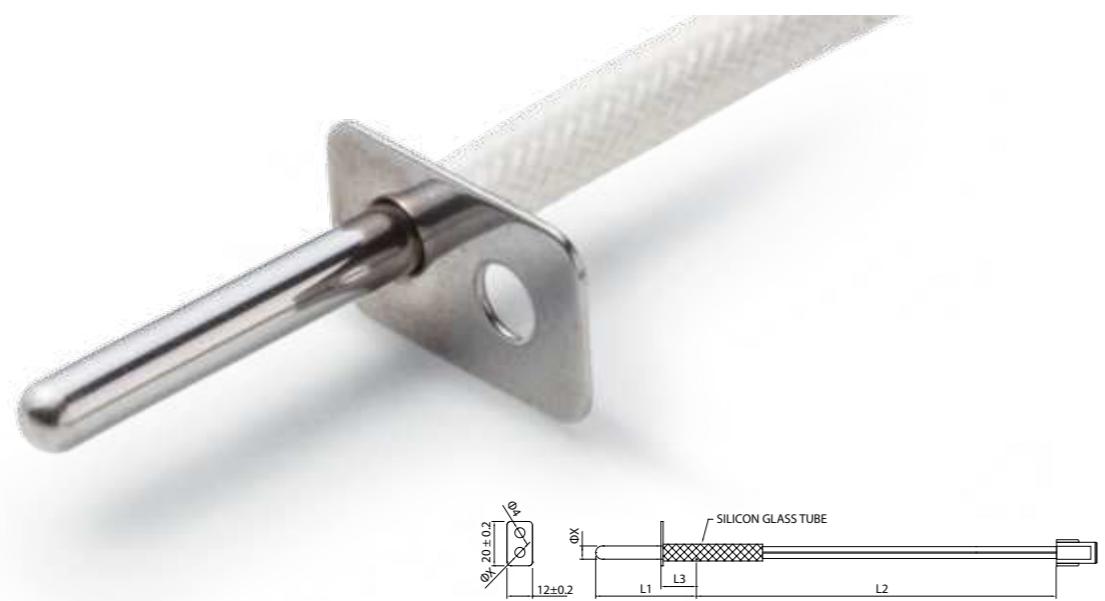

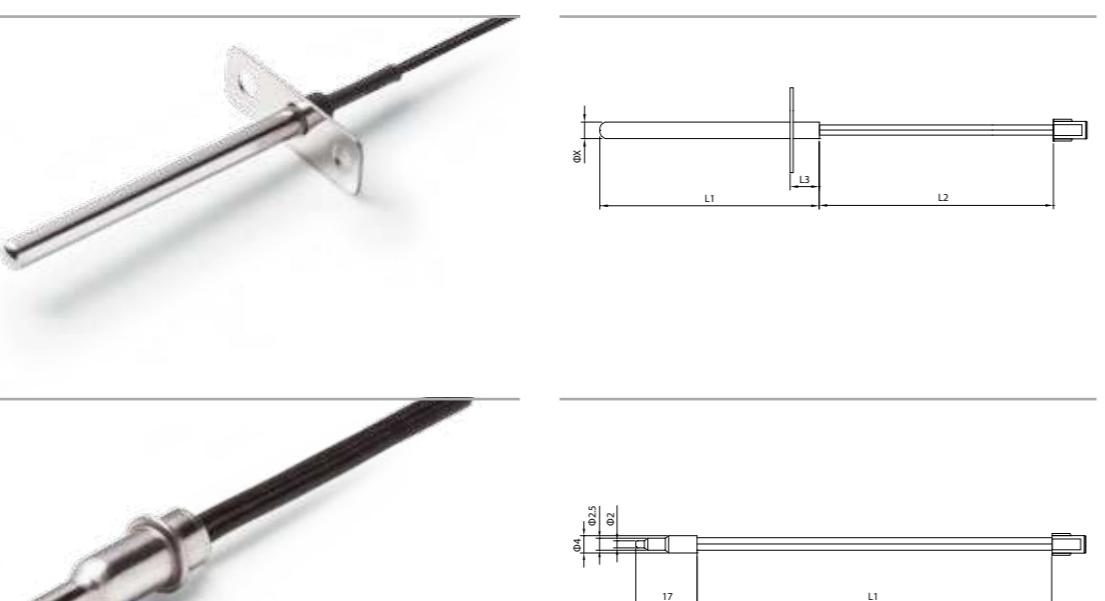

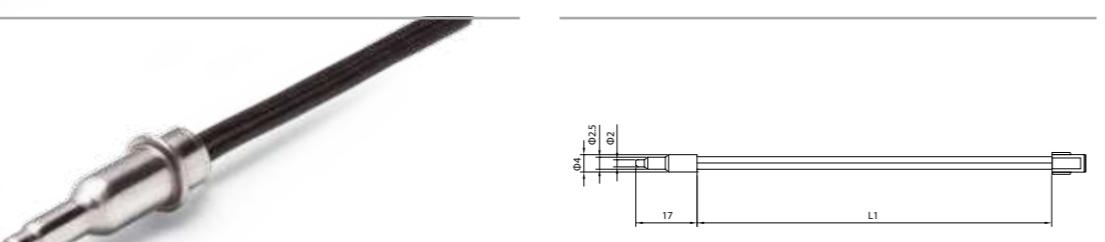

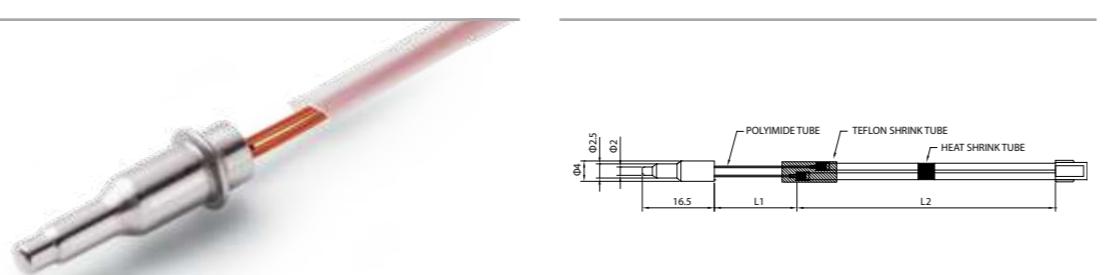

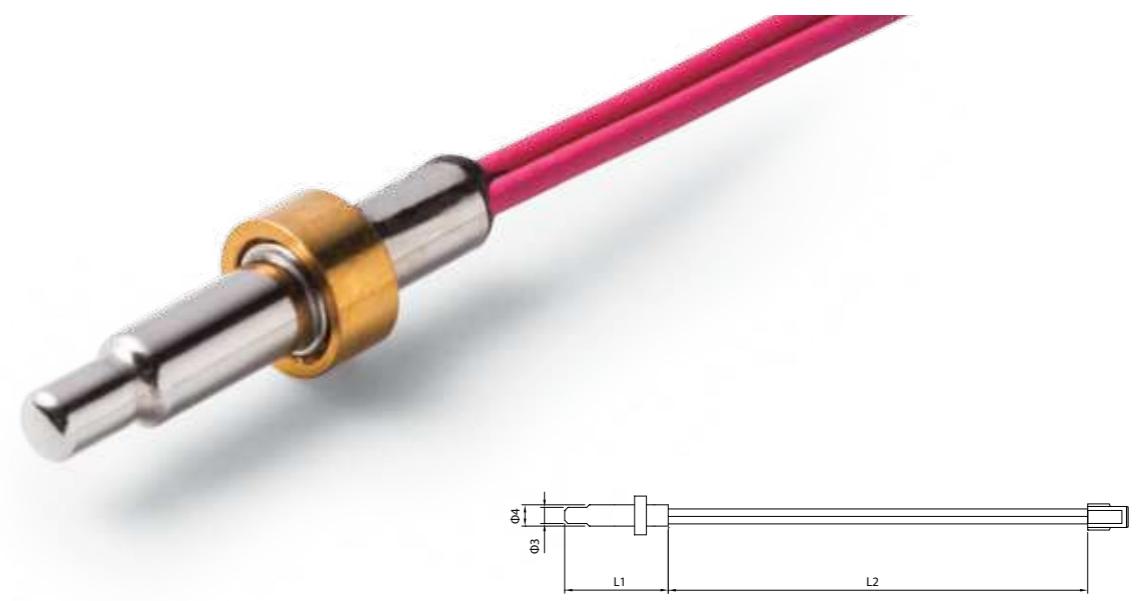

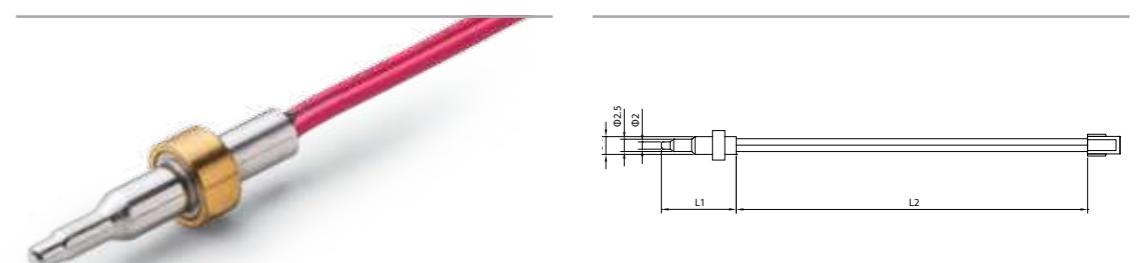

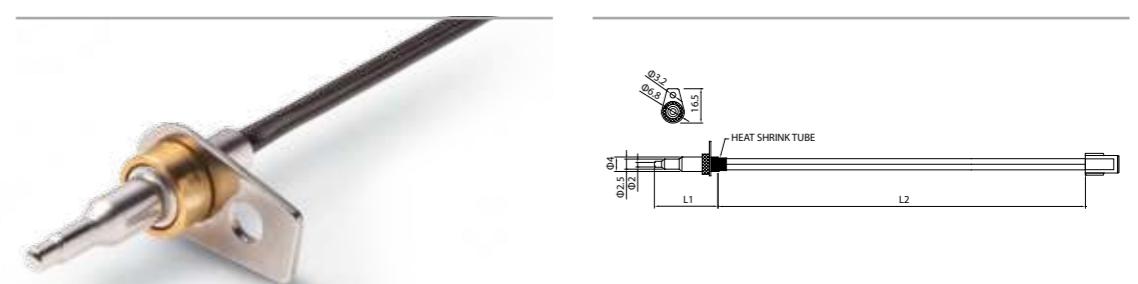

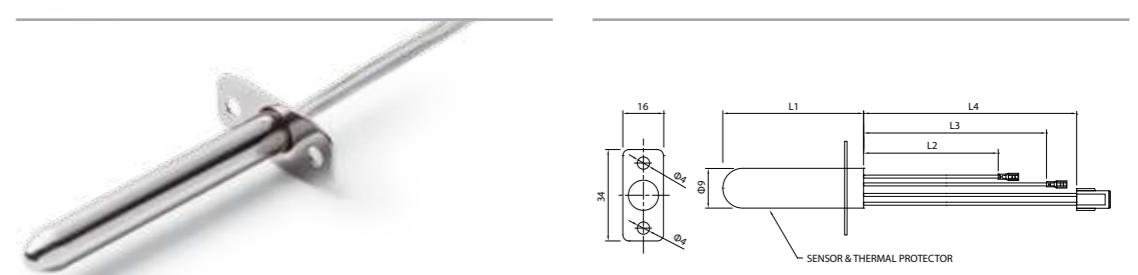

FEATURES

- Operating Temperature : -20 ~ 80 °C
- AT : 10 ~ 45

THERMISTOR GLOSSARY

Dissipation Constant (δ)

The Dissipation constant is the ratio, normally expressed in milliwatts per degree C(mW / °C), at a specified ambient temperature, of a change in power dissipation in a thermistor to the resultant body temperature change.

Material Constant (β)

The material constant of a thermistor is a measure of its resistance at one temperature compared to its resistance at a different temperature. Its value may be calculated by the formula shown below and is expressed in degree kelvin (°K)

$$\beta = \frac{\log_{10} \frac{(R_0 T_1)}{(R_0 T_2)}}{\left(\frac{1}{T_1} - \frac{1}{T_2} \right) \log_e}$$

- $R_0 T_1$ is the zero-power resistance at absolute temperature T_1 .
- $R_0 T_2$ is the zero-power resistance at absolute temperature T_2 .
- e is the naperianbase 2.71828.
- T_1 is temperature 1, experssed in degree kelvin.
- T_2 is temperature 2, experssed in degree kelvin.

Maximum Operating Temperature

The maximum operating temperature is the maximum body temperature at which the thermistor will operate for an extended period of time with acceptable stability of its characteristics. This temperature can be the result of internal or external heating, or both, and should not exceed the maximum value specified.

Maximum Steady-state Current (Imax)

The maximum steady-state current is the rating of the maximum current, normally expressed in ampere(A), allowable to be conducted by an inrush limiting thermistor for extended period of time.

Negative Temperature Coefficient (NTC)

A NTC thermistor is one whose zero-power resistance decreases with an increase in temperature.

Resistance Ratio (RT1/RT2)

The resistance ratio of measured resistance at any two reference temperature points. There is no industry standard ratio, although three particular temperature ranges are most common.

R 0°C	R 25°C	R 25°C
R 50°C	R 85°C	R 125°C

The Dae Kwang standard resistance ratio is R@25°C / R@85°C.

Resistance - Temperature Characteristic

The resistance-temperature characteristic is the relationship between the zero-power resistance of a thermistor and its body temperature.

Stability

The stability of a thermistor is the ability of it to retain specified characteristics after being subjected to designated environmental or electrical test conditions.

Standard Reference Temperature

The standard reference temperature is the thermistor body temperature at which nominal zero-power resistance is specified and is usually 25°C

Thermal Time Constant (T)

The thermal time constant is the time required for a thermistor to change 63.2percent of the total difference between its initial and final body temperature when subjected to a step function change in temperature under zero-power conditions and is normally expressed in seconds.

Thermistor

A thermistor is a thermally sensitive resistor whose primary function is to exhibit a change in electrical resistance with a change in body temperature.

Zero-Power Resistance @ 25°C (Ro)

The zero -power resistance is the DC resistance value of a thermistor measured at a specified temperature with power dissipated by the thermistor low enough that any further decrease in power will result in not more than 0.1% change in resistanste.

Zero-Power Temperature Coefficient of Resistance (αT)

Zero-power coefficient of resistance is the radio at the specified temperature (T) of the rate of change of zeropower resistance with temperature to the zero-power resistance of the thermistor. The temperature coefficient is commonly expressed in percent per degree C (% / °C).

$$\alpha_T = \frac{1}{RT} - \frac{(D RT)}{(D T)}$$

RADIAL TYPE THERMISTOR

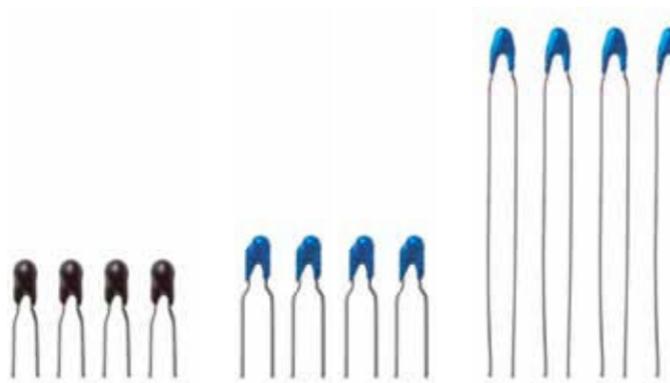

The precision interchangeable thermistors are small high quality, low cost, epoxy encapsulated, precision curve matched devices which are available in a variety of electrical parameters.

These thermistors provide highly accurate and stable temperature sensing capability for applications such as temperature measurement or compensation.

- Dissipation constant : 3 mW / °C
- Thermal time constant : Max. 12 sec
- Maximum power rating : 30 mW (at 25 °C)
- Operating temperature : -30 °C ~ +120 °C

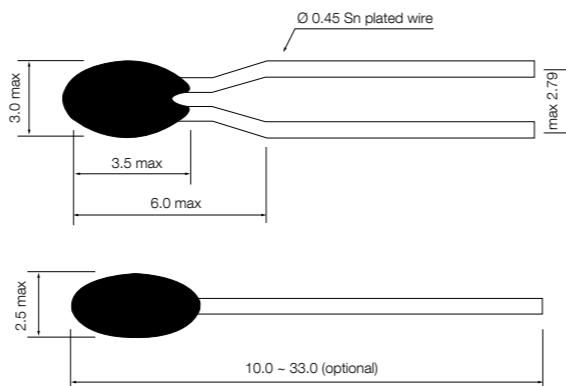

Options

- Special encapsulants or probe housings
- Tape and reel packing
- Non-standard resistance value and tolerances

Part Number Designation

C	A	103	H	G
<ul style="list-style-type: none"> β - Constant tolerance Resistance tolerance at 25 °C (F: 1%, G: 2%, H: 3%, J: 5%) Resistance value at 25 °C β - Constant code Radial chip type thermistor

* Other resistance tolerance and specifications are available.

DIODE TYPE THERMISTOR

The glass encapsulated thermistors are small, hermetically sealed, glass encapsulated(DO-35 package) devices. Their high sensitivity makes them especially useful in applications such as temperature measurement, temperature control, liquid level indication, flow measurement and temperature compensation. These low cost devices exhibit excellent long term stability and repeatability.

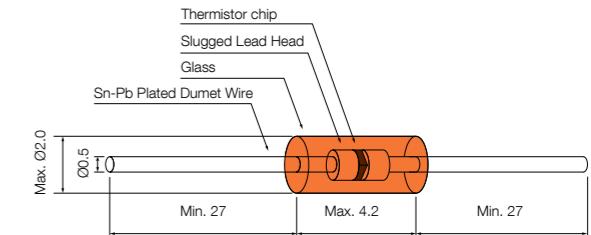

- Dissipation constant : 2.4mW / °C
- Thermal time constant : Max. 15 sec
- Maximum power rating : 25mW (at 25 °C)
- Operating temperature range : -30 °C ~ +250 °C

Options

- Special encapsulants or probe housings
- Tape and reel packing
- Non-standard resistance value and tolerances
